

# RE-RECORD

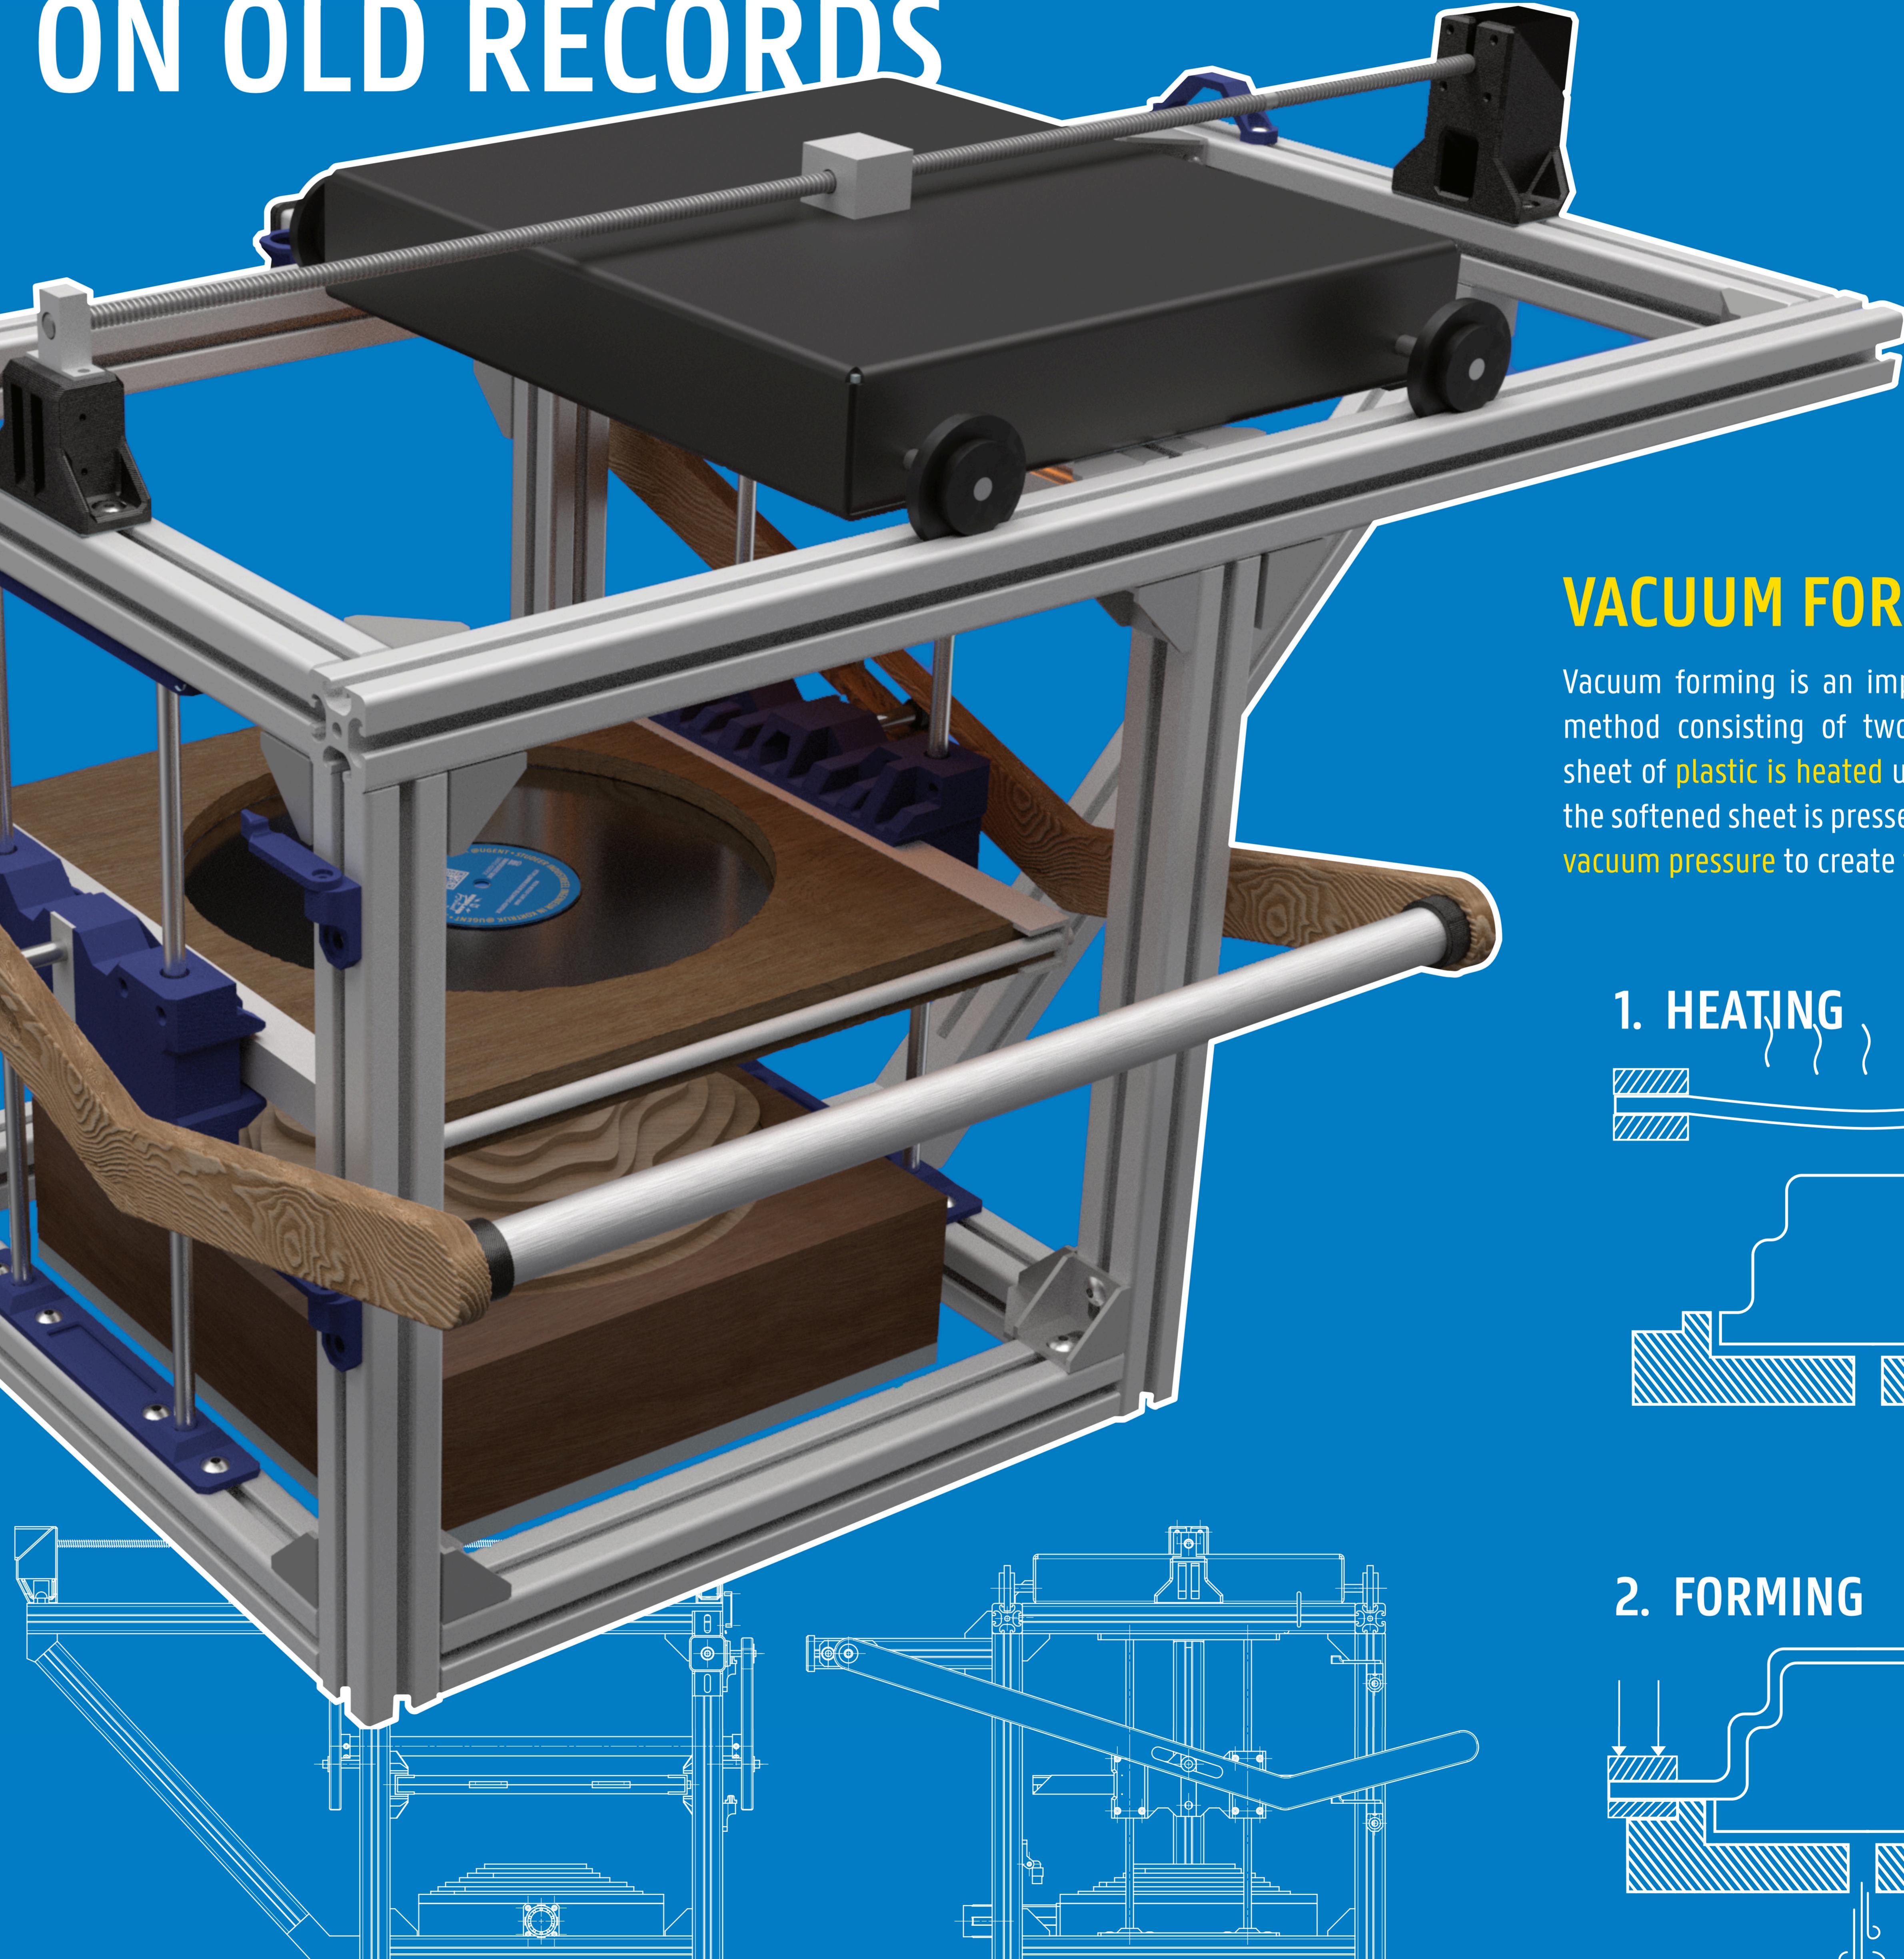

## PUT YOUR OWN SPIN ON OLD RECORDS

### GIVE LIFE BACK TO MUSIC

Vinyl records are making a strong comeback, reigniting the charm of analog music in a digital world. But not every record is destined to spin again. Scratched, warped, or forgotten, countless discs sit neglected in storage or end up in landfills.

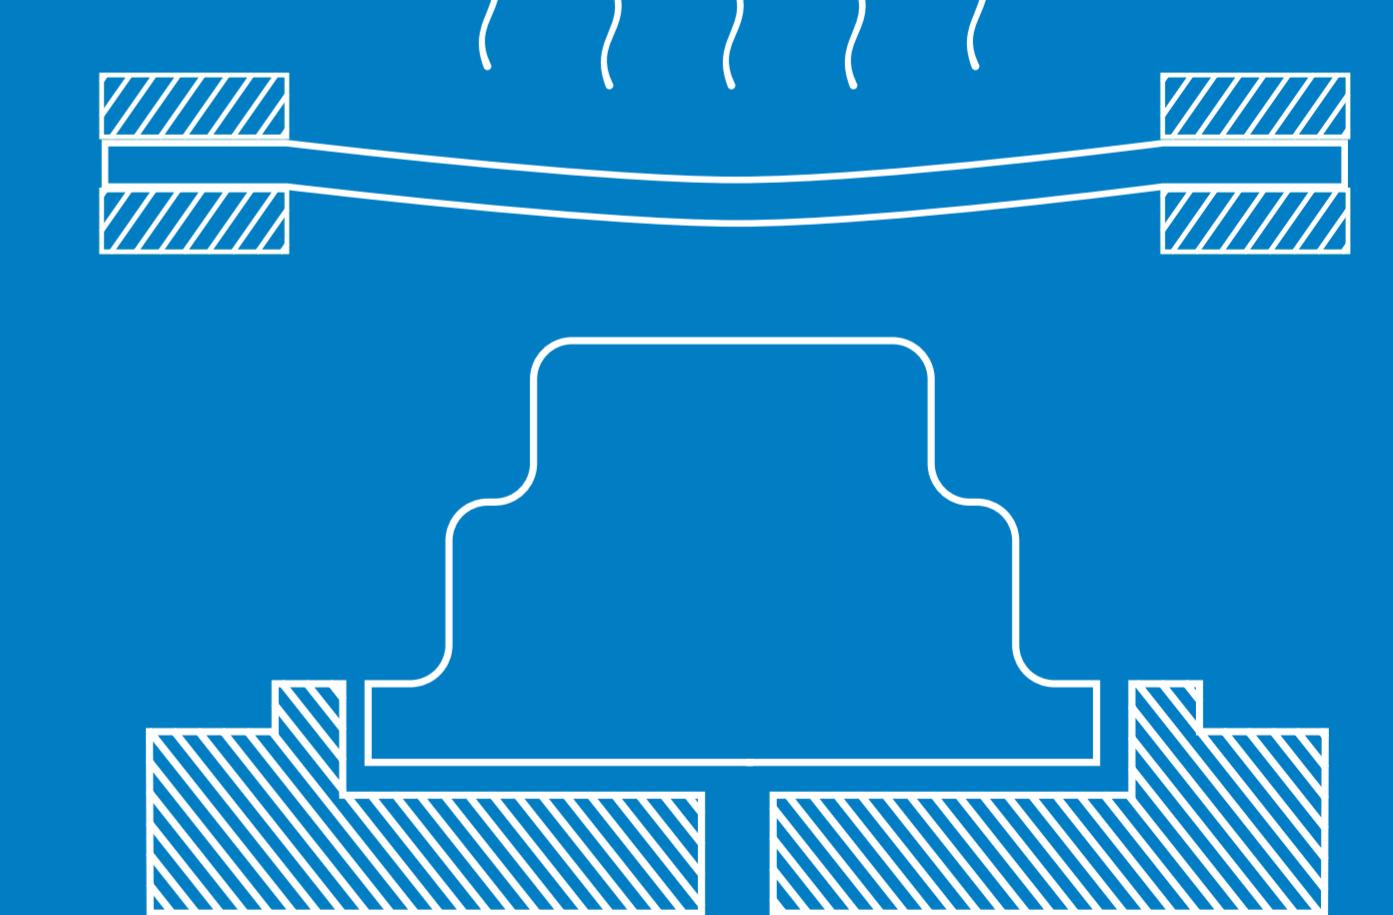

That's where Re-Record comes in. This innovative vacuum forming machine reimagines the potential of these old records—not as music, but as stylish, functional bowls. With Re-Record, we merge sustainability and design, preserving the legacy of vinyl while giving it a new purpose.

### VACUUM FORMING

Vacuum forming is an important manufacturing method consisting of two major steps. First a sheet of plastic is heated until it turns soft. Then the softened sheet is pressed against a mold using vacuum pressure to create the desired shape.

#### 1. HEATING

#### 2. FORMING
